ACCESS · INDIGENOUS SKILLS 4 SUCCESS

Teach identification. Check understanding.

Answers, feedback and nine-skills evidence for CAT-ID-01–10.

ASPHALT · CLASSROOM EDITION · 30 OCTOBER 2026

Teach the source check

Model one callout: show the leader line, read the exact term, explain its purpose and name the publication/page. Then ask the learner to do the next example. Accept pointing, speech or accessible text for identification, and collect writing or digital work when those skills are being assessed.

Record: accurate name; correct callout; correct source/model scope; explanation of uncertainty; successful check-back. Give feedback and another attempt. These classroom records do not certify equipment operation or complete a technical trade competency.

Answer and observation guidance

CAT-ID-01

Follow the material

Tractor and screed. The feeder chain carries material through the feeder path; the augers distribute it across the width. Use the original leader lines, not the nearest-looking feature. The screed plate is the lower working surface that shapes the mat.

CAT-ID-02

Read every conveyor callout

1 guide rollers; 2 trough rollers; 3 return idlers; 4 tail pulley; 5 tail pulley bearings; 6 bunk rollers; 7 head pulley. Example: “The component is the tail pulley bearings in the cold-planer conveyor diagram. CAT-08, Cold Planer Parts Reference Guide, PDF page 25, callout 5.”

CAT-ID-03

Count callouts without inventing quantities

7 + 6 = 13 legend entries across the diagrams. 2 × 7 = 14 printed labels on two posters. A callout may identify a type of part, several instances or an assembly. Required quantity and part number come from the applicable parts table and machine identity.

Answer and observation guidance

CAT-ID-04

Check a roller-control match

6 emergency stop knob; 12 parking brake; 14 water spray system; 16 vibratory mode / emulsion switch. Engine start switch is 15, not 12. Retain optional equipment and model conditions. This is a diagram check, not an instruction to operate the controls.

CAT-ID-05

Follow the loader letters

A loader arm to front frame; K lift cylinder to loader arm; Y lift cylinder to front frame; S1 steering cylinder to rear frame; S2 steering cylinder to front frame. A complete check-back preserves front/rear and the cylinder name.

CAT-ID-06

Save a source you can find again

CAT-08, QEXQ3131-01 (05/2026), original PDF page 25, sources/cold-planer-parts-official/p0001-0025.pdf, viewer page 25. Accept the actual generated path from the link if the collection is reorganized. Observe save/reopen/retrieval; a written promise to save is not evidence of the Digital action.

Answer and observation guidance

CAT-ID-07

Respond to a changed machine record

Move from EMB to KSA and the stated lift configuration. Obtain the complete serial/product identification number and verify the current applicable parts catalogue and arrangement. Prefix and lift type affect the table lookup. Keep the original and corrected record; do not issue a part order from this exercise.

CAT-ID-08

Make a component check-back

Accept callouts 1–4 with exact source names and correct diagram location. Observe both contributions and an actual check-back. If the listener identifies the wrong ski or edge, return to the leader line and repair the message together.

CAT-ID-09

Design a useful learning card

Keep both ideas, the reader’s task result and the explained revision. A useful card has a readable callout, source/page credit, accurate scope and no obscured labels. Do not redraw a WHMIS symbol or replace a manufacturer warning with invented artwork.

Answer and observation guidance

CAT-ID-10

Complete a machine identification record

A complete record distinguishes what is stated in the manual from what is known about the actual machine. Unknown identity fields remain explicit. The reviewer verifies the same source and records the result. No learner needs to share personal information or enter an operating area to complete this classroom task.

Nine Skills for Success: evidence to keep

Skill	Evidence in these tasks
Reading	Matched callout, table heading and model scope: 01, 02, 04, 05, 07, 10.
Writing	Authored identification note and corrected machine record: 02, 06, 10.
Numeracy	Two checked counts and the limit of the result: 03.
Digital	Observed search, file save, reopen and source retrieval: 06, 09.
Problem solving	Detected mismatch, evidence check and unresolved information: 03, 04, 07.
Communication	Exact term, location and listener check-back: 01, 05, 08.
Collaboration	Two contributions, shared source check and recorded correction: 08, 10.
Adaptability	First and revised record after the supplied change: 07.
Creativity and innovation	Two proposed cards, reader trial and explained revision: 09.
