ACCESS · INDIGENOUS SKILLS 4 SUCCESS

Know the machine. Name the part.

A visual parts atlas for paving, milling, compaction and supporting equipment.

ASPHALT · CLASSROOM EDITION · 30 OCTOBER 2026

A shared language for the crew

A precise part name helps a crew explain an observation, find the right diagram and check understanding. Follow the leader line to the part. Say its name. Read its function. Then check the model and publication before using the information.

01

Find the machine
Record model, serial-number prefix and attachment.

02

Find the assembly
Use the section title and diagram.

03

Follow the callout
Match its number, letter or printed label.

04

Check the match
Confirm model, build and serial range in the source.

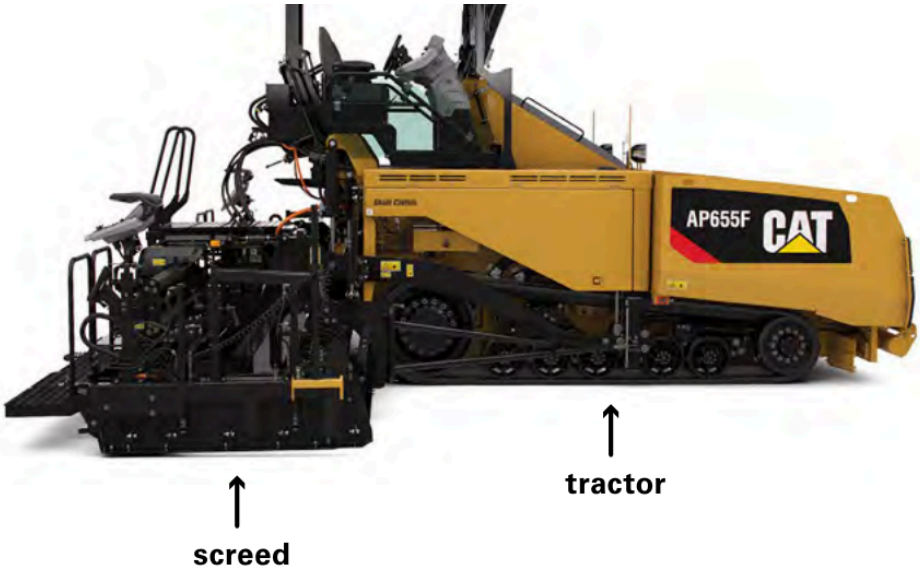

> These selected diagrams teach component identification. For the complete parts list for a training machine, use its serial-specific parts catalogue. The collection includes two complete roller operation manuals; public parts reference guides list selected parts. See equipment coverage and remaining manual needs.

Use photographs, pointing, reading aloud and partner check-backs as needed. Learners may bring workplace experience or work entirely from these supplied examples. Local Nation-specific language or knowledge is included only through locally chosen participation.

Two main sections of the paver

Conceptual paver example in the 2016 application guide; this picture does not identify a specific machine serial number.

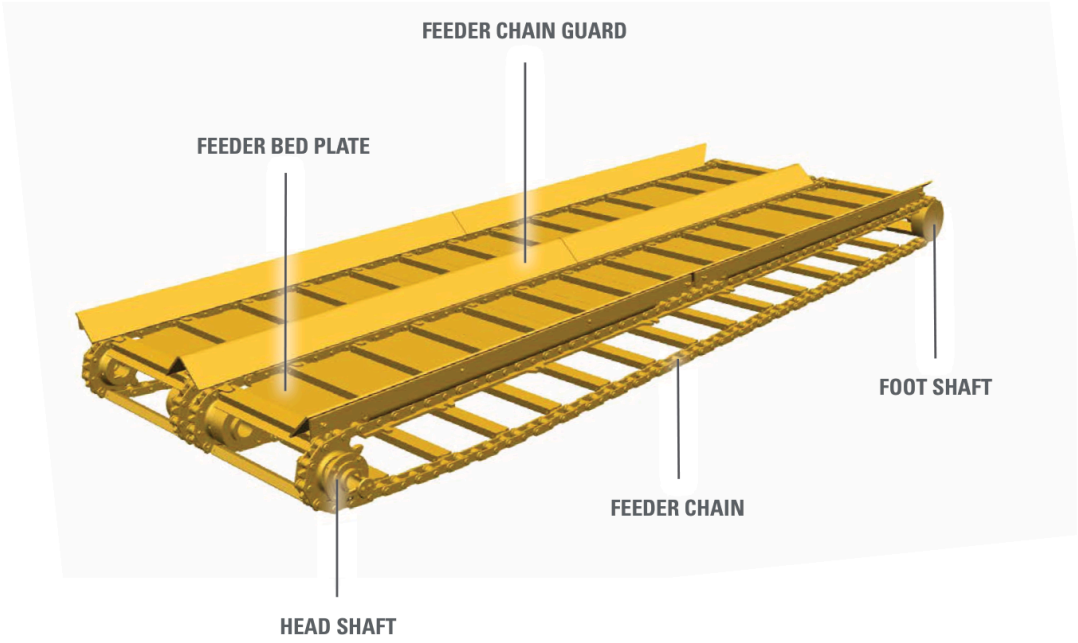

Caterpillar. (2016). *Guide to Asphalt Paving* (QEBQ1888), PDF p. 63. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
screed	**Screed** Places and shapes the mat behind the tractor.
tractor	**Tractor** Provides propulsion, power and material-handling functions.

FIGURE 02 · CAT-07 · SOURCE PDF PAGE 11

Inside the paver: the feeder system

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

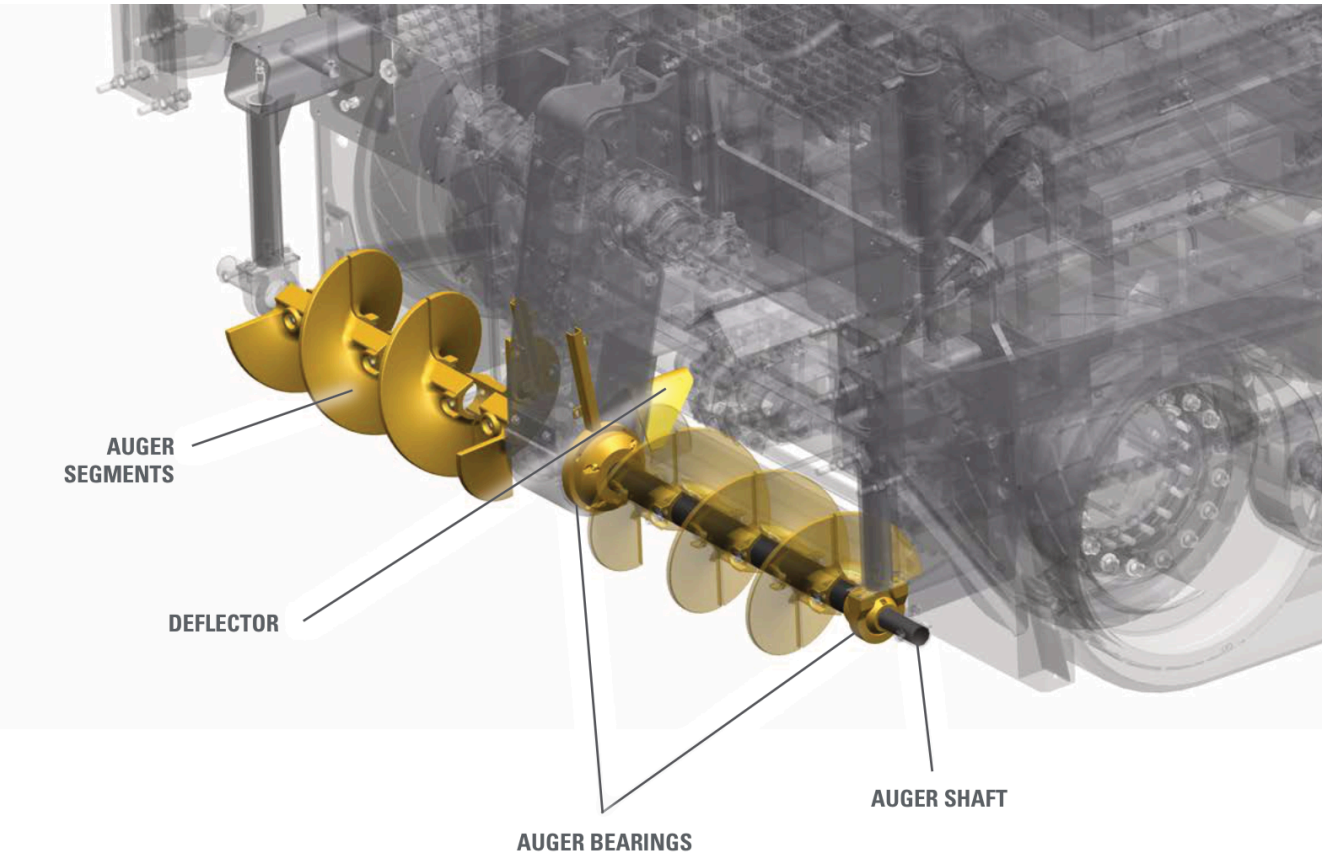

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 11. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
label	**Feeder bed plate** Wear surface beneath material moving through the feeder system.
label	**Feeder chain guard** Protective wear plate associated with the feeder-chain path.
label	**Foot shaft** Shaft at the foot end of the feeder assembly.
label	**Feeder chain** Linked assembly that carries material through the feeder path.
label	**Head shaft** Shaft at the head end of the feeder assembly.

FIGURE 03 · CAT-07 · SOURCE PDF PAGE 15

Auger parts: identify the assembly

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

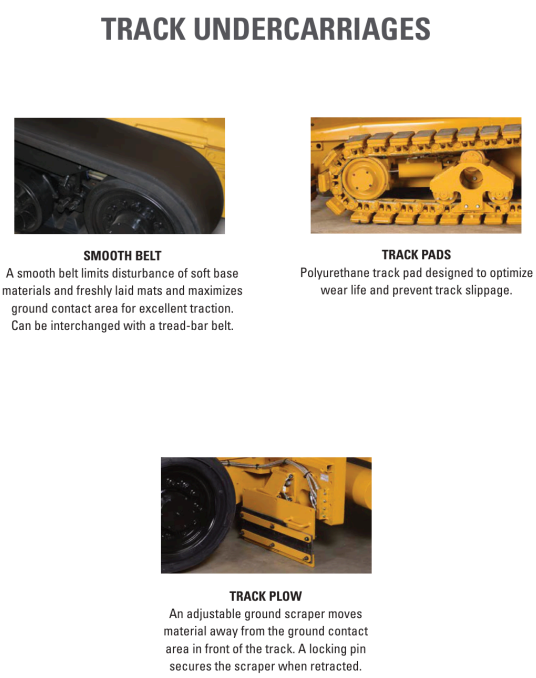

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 15. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
label	**Auger segments** Spiral sections that move mixture across the width.
label	**Deflector** Guides material near the auger assembly.
label	**Auger bearings** Support the rotating auger shaft.
label	**Auger shaft** Shaft on which the auger segments are mounted.

FIGURE 04 · CAT-07 · SOURCE PDF PAGE 19

Paver contact with the ground

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

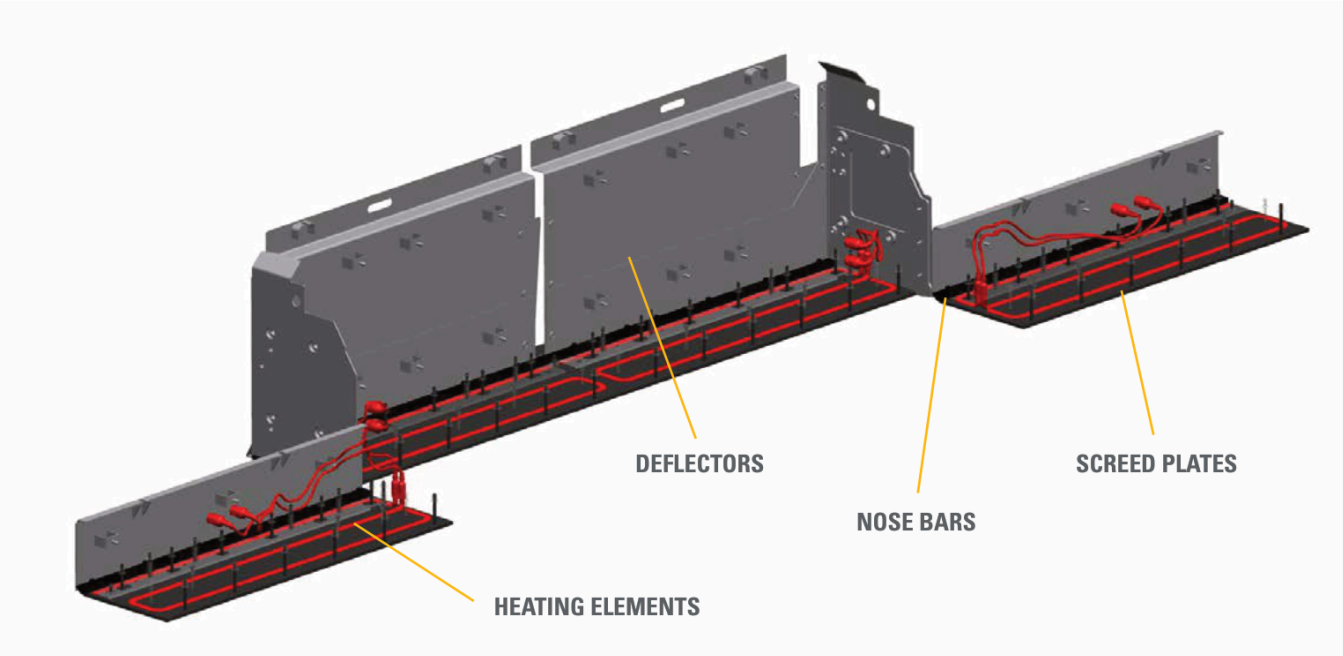

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 19. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
photo	**Smooth belt** Ground-contact belt used on the illustrated track arrangement.
photo	**Track pads** Wear/contact pads on the illustrated track arrangement.
photo	**Track plow** Scraper ahead of the track contact area.

FIGURE 05 · CAT-07 · SOURCE PDF PAGE 22

Screed plates and heating components

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

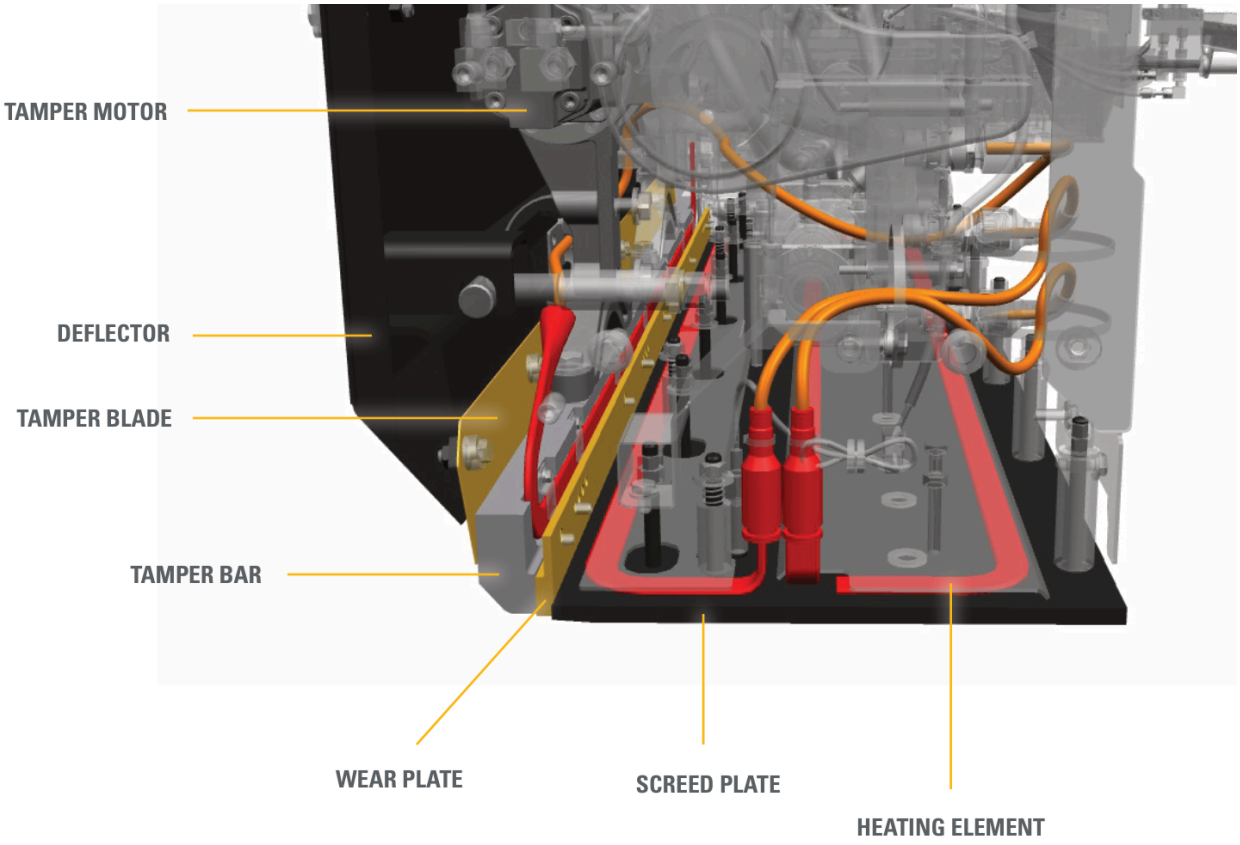

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 22. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
label	**Deflectors** Guide material at the screed assembly.
label	**Screed plates** Lower wear surfaces that contact the placed mixture.
label	**Nose bars** Wear components at the leading part of the screed plate arrangement.
label	**Heating elements** Heat the applicable electrically heated screed components.

FIGURE 06 · CAT-07 · SOURCE PDF PAGE 28

Look inside a tamper-bar screed

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

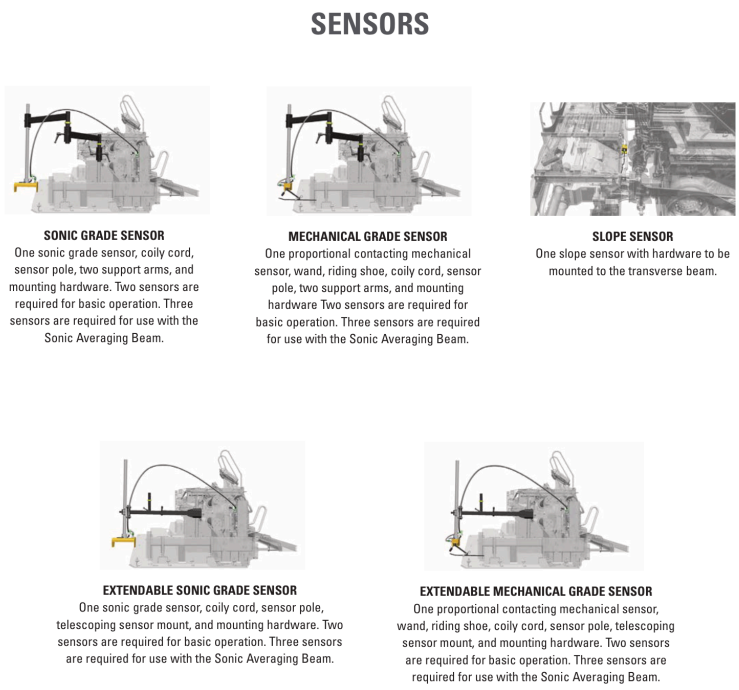

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 28. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
label	**Deflector** Material-guiding component.
label	**Tamper blade** Working element in the tamping assembly.
label	**Tamper bar** Bar assembly that provides tamping action.
label	**Wear plate** Replaceable wear surface in the illustrated assembly.
label	**Screed plate** Surface that shapes the mat.
label	**Heating element** Heater for the applicable component.
label	**Tamper motor** Drive component for the tamping system.

FIGURE 07 · CAT-07 · SOURCE PDF PAGE 34

Identify grade and slope sensors

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 34. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
photo	**Sonic grade sensor** Non-contact grade-reference sensor.
photo	**Mechanical grade sensor** Contacting sensor with a wand/riding shoe.
photo	**Extendable sonic grade sensor** Sonic sensor with an extendable mounting arrangement.
photo	**Extendable mechanical grade sensor** Mechanical sensor with an extendable mounting arrangement.
photo	**Slope sensor** Sensor associated with the transverse beam for slope information.

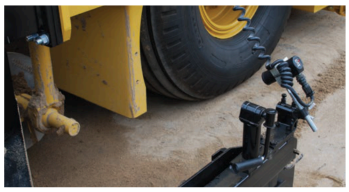

FIGURE 08 · CAT-07 · SOURCE PDF PAGE 43

Feed sensing and hopper information

Multiple paver/screed models and build numbers; applicability is specified in individual tables.

SONIC MATERIAL FEED SENSORS
Four sonic transducers mounted above the conveyor discharge and at the end of the augers activate automatically to maintain a preset amount of material ahead of the screed.

Two sonic transducers mounted at the end of the augers automatically maintain a preset amount of material ahead of the screed.

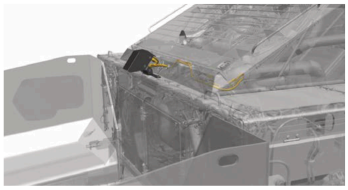

PADDLE MATERIAL FEED SENSORS
Two paddle sensors located in the auger chamber activate the conveyors to automatically maintain the desired amount of material ahead of the screed.

HOPPER MATERIAL LEVEL AND TEMPERATURE SENSOR
Mounts above the hopper to monitor the amount of material and the temperature of the mix using a single infrared temperature sensor. Material level and temperature information is available on the machine display at the operator station.

Not compatible with certain serial numbers. Before ordering, provide machine serial number to your Cat dealer.

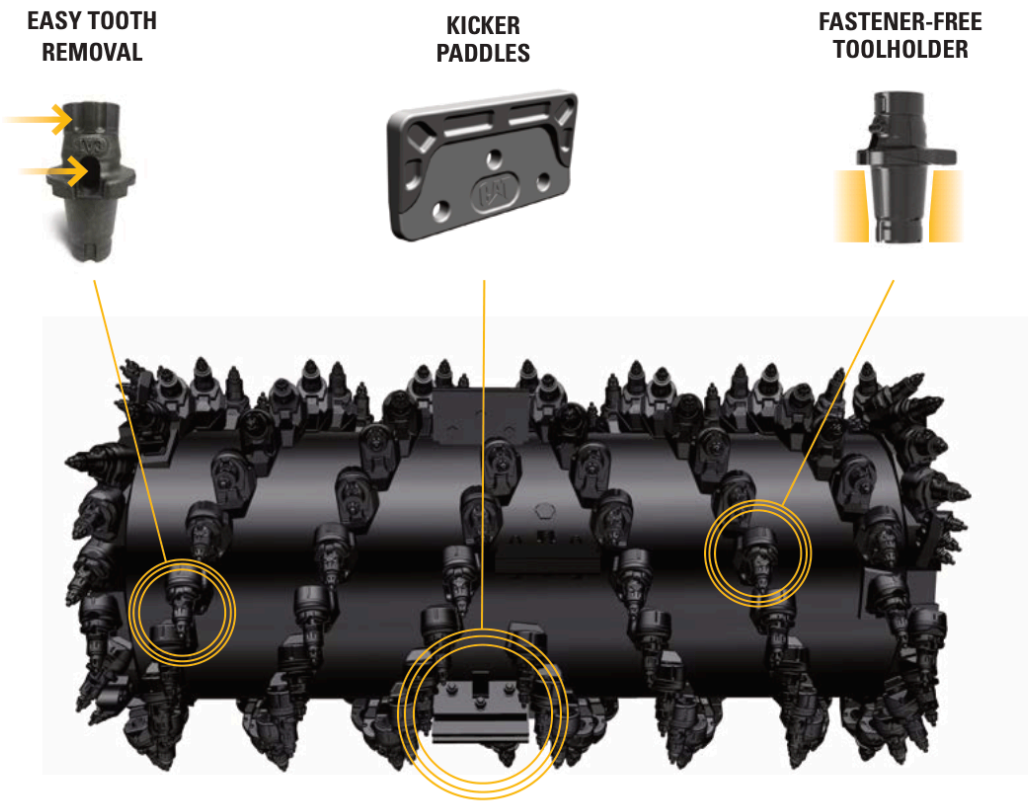

Caterpillar. (2024). *Pavers and Screeds Parts Reference Guide* (QEXQ3132-02 (08/2024)), PDF p. 43. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
photo	**Sonic material feed sensors** Sense material around conveyor discharge or auger ends in the applicable arrangement.
photo	**Paddle material feed sensors** Contacting material sensors in the auger chamber.
photo	**Hopper material level and temperature sensor** Reports hopper material information on applicable configurations.

FIGURE 09 · CAT-08 · SOURCE PDF PAGE 8

Cutting system: rotor details

Cat System K rotor example. Other rotor systems and retaining arrangements differ; no change-out procedure is taught here.

Caterpillar. (2026). *Cold Planer Parts Reference Guide* (QEXQ3131-01 (05/2026)), PDF p. 8. Full source page. Original illustration reproduced as a crop; labels unchanged.

Mark	Component and meaning
label	**Kicker paddles** Move cut material through the rotor system.
label	**Fastener-free toolholder** Holds the applicable cutting tool in the illustrated System K design.
detail	**Tooth / cutting bit** Cutting tool that contacts the material being removed.
