ACCESS · INDIGENOUS SKILLS 4 SUCCESS

Find the part. Explain the evidence.

Ten complete identification tasks using the CAT parts atlas.

ASPHALT · CLASSROOM EDITION · 30 OCTOBER 2026

Find it, explain it, check it

Work from the atlas and the original PDF pages. Use a separate notebook, typed document or the spaces on a printed copy. A partner may read a prompt aloud; each learner keeps their own answer and source record.

> These are classroom identification tasks. Actual machine walkarounds, access, isolation and operation require the applicable manual, site procedures and qualified supervision.

Suggested route: tasks 1–5 for diagram reading, 6–7 for document control, 8–10 for checked communication and a reusable identification record. All nine Skills for Success produce observable work across the sequence.

Identification practice

CAT-ID-01 · Reading · Communication

Follow the material

Open Figures 1–3 and 5. Name the paver’s two main sections. Identify the feeder chain, auger shaft and screed plate. Explain to a partner how the feeder and augers have different roles. Have the listener point to each named part.

CAT-ID-02 · Reading · Writing

Read every conveyor callout

In Figure 12, list names for callouts 1–7. Then write a two-sentence identification note for callout 5: assembly, component, source publication and PDF page.

CAT-ID-03 · Numeracy · Problem solving

Count callouts without inventing quantities

Figure 12 has 7 callout numbers. Figure 13 has 6. How many distinct callout numbers are listed across the two legends? If two identical classroom posters show Figure 12, how many numbered labels appear across those two posters? Explain why neither calculation tells you how many replacement parts to order.

Identification practice

CAT-ID-04 · Reading · Problem solving

Check a roller-control match

Figure 14 identifies controls on the CB2.5 GC, CB2.7 GC and CC2.7 GC manual’s stated serial ranges. Locate 6, 12, 14 and 16. A fictional worksheet calls number 12 “engine start.” Correct it using the diagram.

CAT-ID-05 · Reading · Communication

Follow the loader letters

Use Figure 17. Find A, K, Y, S1 and S2. Describe the two connection points named for each pin. Ask a partner to repeat the difference between S1 and S2.

CAT-ID-06 · Digital · Writing

Save a source you can find again

Search the CAT library for “tail pulley”. Open the hit from CAT-08 PDF page 25. Save a note containing publication, revision, original PDF page, part filename and local viewer page. Close the note, reopen it and use it to return to the same diagram.

Identification practice

CAT-ID-07 · Adaptability · Problem solving

Respond to a changed machine record

Fictional record A says: “950M, prefix EMB, automatic standard lift.” Record B corrects it to: “950M, prefix KSA, standard lift; complete serial number not supplied.” Open CAT-17 PDF page 6. Mark which table row changes, what information you must still obtain, and why the model name alone is insufficient.

CAT-ID-08 · Communication · Collaboration

Make a component check-back

In pairs, choose a cutting-chamber part in Figure 10. One person gives its callout, exact name, location and source. The other finds it and restates the identification. Swap roles using a different part. Each person records one correction or confirmation.

CAT-ID-09 · Creativity and innovation · Digital

Design a useful learning card

Create two layouts for a learning card containing one credited diagram, a part name, plain-language function and model scope. Ask another reader to find the named part without help. Record what happened, choose a layout, revise it and save the final file.

Identification practice

CAT-ID-10 · Reading · Writing · Collaboration

Complete a machine identification record

Use a supplied training machine record or one of the manuals in the library. Record model, serial applicability, attachment, publication number/revision, assembly, page and callout. Mark unknown fields “to confirm”. A second person checks the source match and signs or initials the classroom record.
