ACCESS · INDIGENOUS SKILLS 4 SUCCESS

Check the hazard reading.

Six complete tasks with product identity, document checks and shared communication.

ASPHALT · CLASSROOM EDITION · 30 OCTOBER 2026

Practise with supplied information

These are fictional classroom records. They are not labels or SDSs for a real product. Use the reference pages and linked CCOHS documents. No product handling is required.

Keep each learner’s source check, calculation, written note and revision. Use pointing or reading aloud for access, then observe the specific skill action being assessed.

Answer guidance

WH-01 · Reading · Communication

Name the message

Flame concerns specified fire-related hazards; flame over circle identifies oxidizers. Hot surface on the CAT safety page is a machine warning. Exact chemical hazards come from the actual label and SDS.

WH-02 · Reading · Problem solving

Match the right document

Neither is confirmed. Obtain the current SDS for the exact product and supplier, compare product identifiers and label information, and resolve any distributor/supplier naming relationship with the responsible person. Do not choose by similar title.

WH-03 · Reading · Digital

Find the section

Sections 4, 6, 7, 8 and 16 respectively. Source: CCOHS WHMIS—Safety Data Sheet (SDS), revised 28 May 2026. Observe the digital save/reopen action.

Answer guidance

WH-04 · Numeracy · Writing

Keep a count and report a gap

2 + 1 = 3 cards. 3 ÷ 12 × 100 = 25%. Example: “Three of twelve classroom cards lack a confirmed SDS match: two names differ and one sheet is missing. Obtain and verify the correct sheets before using these as product-specific examples.”

WH-05 · Problem solving · Communication

No symbol is not no hazard

Some hazard classes/categories require no pictogram. Read the complete label and SDS Section 2 and follow workplace training. The biohazardous infectious materials pictogram also uses a circular border. A partner should restate the need to check the full information.

WH-06 · Adaptability · Collaboration · Creativity and innovation

Update a shared briefing

Retain both design options, the changed revision record, a reader trial and explained improvement. Each learner contributes and checks the new product/date against the supplied revised document. The exercise does not imply every SDS revision changes the hazard classification.
