INDIGENOUS SKILLS 4 SUCCESS

BOOK 1 · LEARNER TEXTBOOK

Nine skills for learning, work and community

Learn the nine Skills for Success through illustrated explanations, complete practice cases, individual checks and projects for learning, work and community.

THE NINE SKILLS

Connected.

01 Reading
02 Writing
03 Numeracy
04 Digital
05 Problem solving
06 Communication
07 Collaboration
08 Adaptability
09 Creativity and innovation

One useful task. Many ways to grow.

Learning, work and community in British Columbia

Practical lessons, complete cases and visual guides for using the nine Skills for Success.

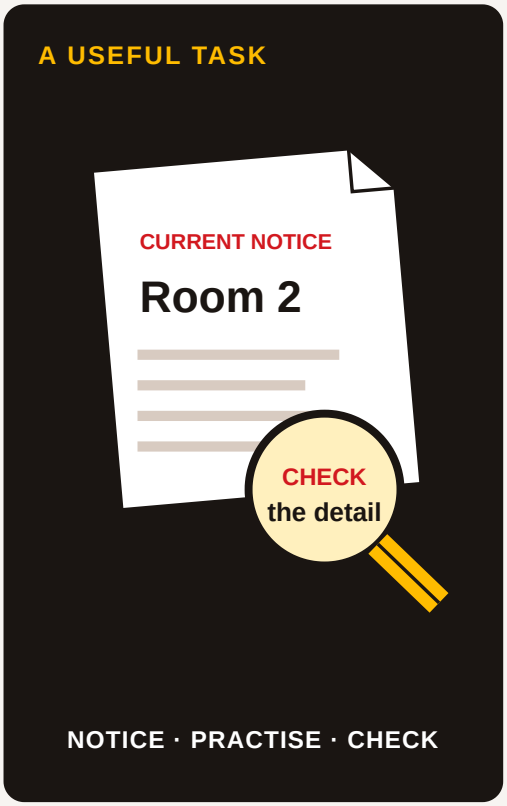

30 October 2026 · Edition 4 · AI literacy and independent practice edition

Six parts of a useful reading process

01 / SKILL COMPONENTS

Reading

Let the question and document guide your next move.

01 **Identify the reading task**

02 **Find the information**

03 **Connect related details**

04 **Understand and apply**

05 **Evaluate the document**

06 **Reflect on the document**

Return to any action when you need to check meaning or evidence.

VISUAL GUIDE

Use the component numbers as an index, not a compulsory sequence. A missing date, unfamiliar word or changed question can send you back to another action.

The Skills for Success Reading components are:

1. **Identify the task that requires you to read.** What are you trying to find out or do?
2. **Identify the information contained in the document(s).** What is here, and how is it organized?
3. **Make connections between different parts of the document(s).** Which details belong together?
4. **Understand and apply the information.** What does it mean for this particular task?
5. **Evaluate the document(s).** Is the information suitable, clear, credible and sufficient?

NUMERACY / WHOLE PACKS + BUDGET

Count the packs. Then check the order.

Fictional version 1 order • folders, pens and labels

Folder target: 18 + 2 spares = 20

7 in stock → 13 to add

13 ÷ 5 = 2.6 packs → 3 whole packs

5 folders **5 folders** **5 folders**

COMPLETE ORDER

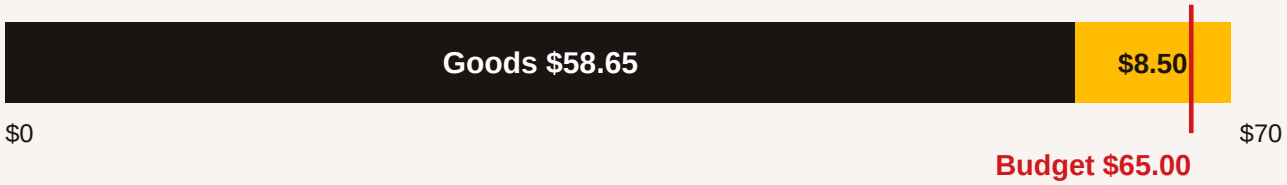

Folders $26.25

+ pens $19.80

+ labels $12.60

7 + 15 = 22 available: 2 beyond the target

Goods $58.65 < $60 → delivery adds $8.50

Delivered: $67.15

$2.15 over budget

Prices include the case's taxes. Calculated order; approval is not supplied.

VISUAL GUIDE

After your attempt, check the worked example: version 1 needs three whole packs of each item. Goods of $58.65 attract $8.50 delivery, making the order $67.15: $2.15 above the $65 budget. All values are fictional.

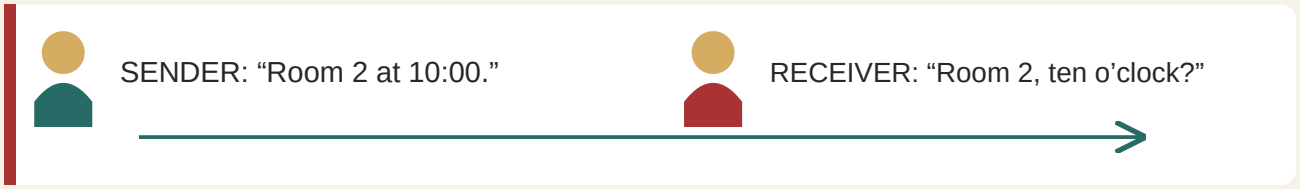

Compare shares fairly

Find the share of each target already covered by stock for folders and pens. Give each as a fraction and a percentage. Which target has the larger share covered, even though the other item has more pieces in stock? Explain the role of the whole in your comparison. Use a strip divided into twenty or forty equal parts, a calculator or another clear representation to check your reasoning.

See it in action · Communication

ACCESS IS4S / COMMUNICATION / SEE IT IN ACTION

Say it. Check it. Switch roles.

1. Agree a usable way to talk.
2. Send the message; check it back.
3. Confirm or clarify, then switch.

WHAT A GOOD RESULT LOOKS LIKE

Both people can state the same plan.

Speech, sign, text or AAC can work. Check meaning, not eye contact.

VISUAL GUIDE

Both people can state the same plan. ACCESS IS4S. (2026). Original fictional teaching diagram.

This small fictional example shows the skill in use. SENDER: “Room 2 at 10:00.”. RECEIVER: “Room 2, ten o’clock?”.

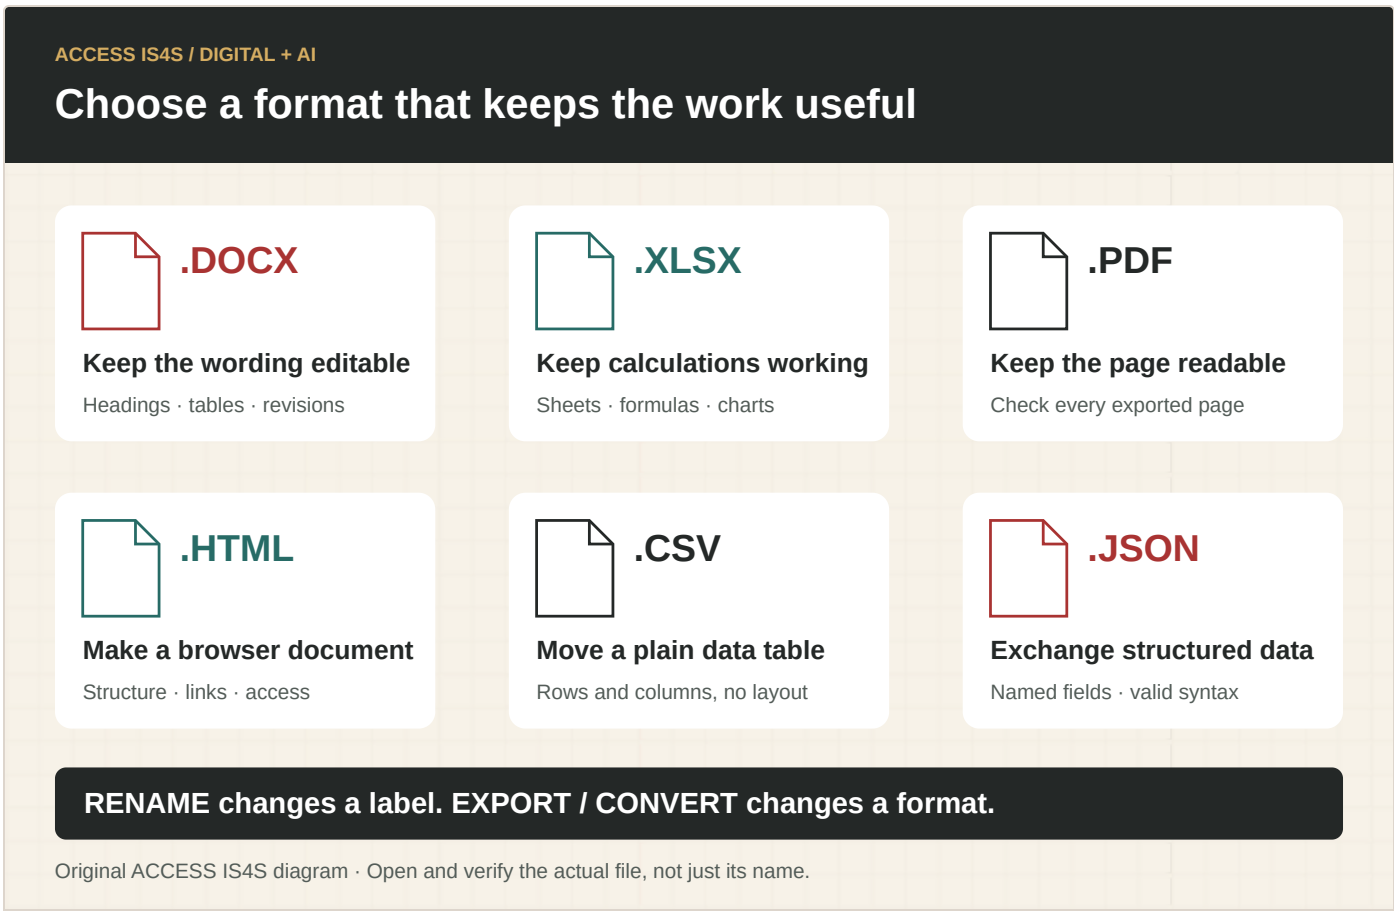

Try it: Agree a usable way to talk. Send the message; check it back. Confirm or clarify, then switch.

Check your result: Both people can state the same plan. Speech, sign, text or AAC can work. Check meaning, not eye contact.

Choose a platform by the job

For each task, choose a suitable product and explain the needed capability: (a) understand a five-page notice, (b) audit a budget workbook, (c) create a one-page HTML information sheet, (d) repeat the same conversion across twenty approved documents. More than one product can be suitable. State one capability you would verify in the actual session before starting.

File extensions are a practical superpower

VISUAL GUIDE

Choose the format for the work it must preserve. Renaming is not conversion. ACCESS IS4S. (2026). Original instructional SVG. Fictional case.

A filename often ends with an **extension**, such as `.docx`. It indicates the intended file format. A format determines what can be stored and which tools can use it. The name, format and contents are different things. Renaming `budget.csv` to `budget.xlsx` does **not** create an Excel workbook. Use a real save/export/conversion process, then reopen the result.

Regroup one whole before subtracting

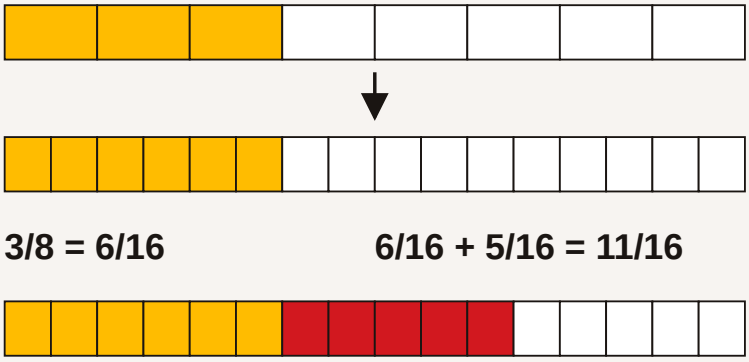

NUMERACY / EQUIVALENCE + REGROUPING

Make the parts the same size.

The quantity stays the same when you rename it in equal parts.

01 ADD WITH EQUAL PARTS

3/8 + 5/16

3/8 = 6/16 6/16 + 5/16 = 11/16

11/16

Same whole. Same-sized parts. Add the number of parts.

02 EXCHANGE ONE WHOLE

4 1/8 − 2 3/16

Rename eighths

4 1/8 = 4 2/16

→

Trade 1 whole for 16/16

4 2/16 = 3 18/16

3 18/16 − 2 3/16 = 1 15/16

CHECK BY ADDING BACK

1 15/16 + 2 3/16 = 3 18/16 = 4 2/16 = 4 1/8

VISUAL GUIDE

Equivalent parts make addition and regrouping visible.

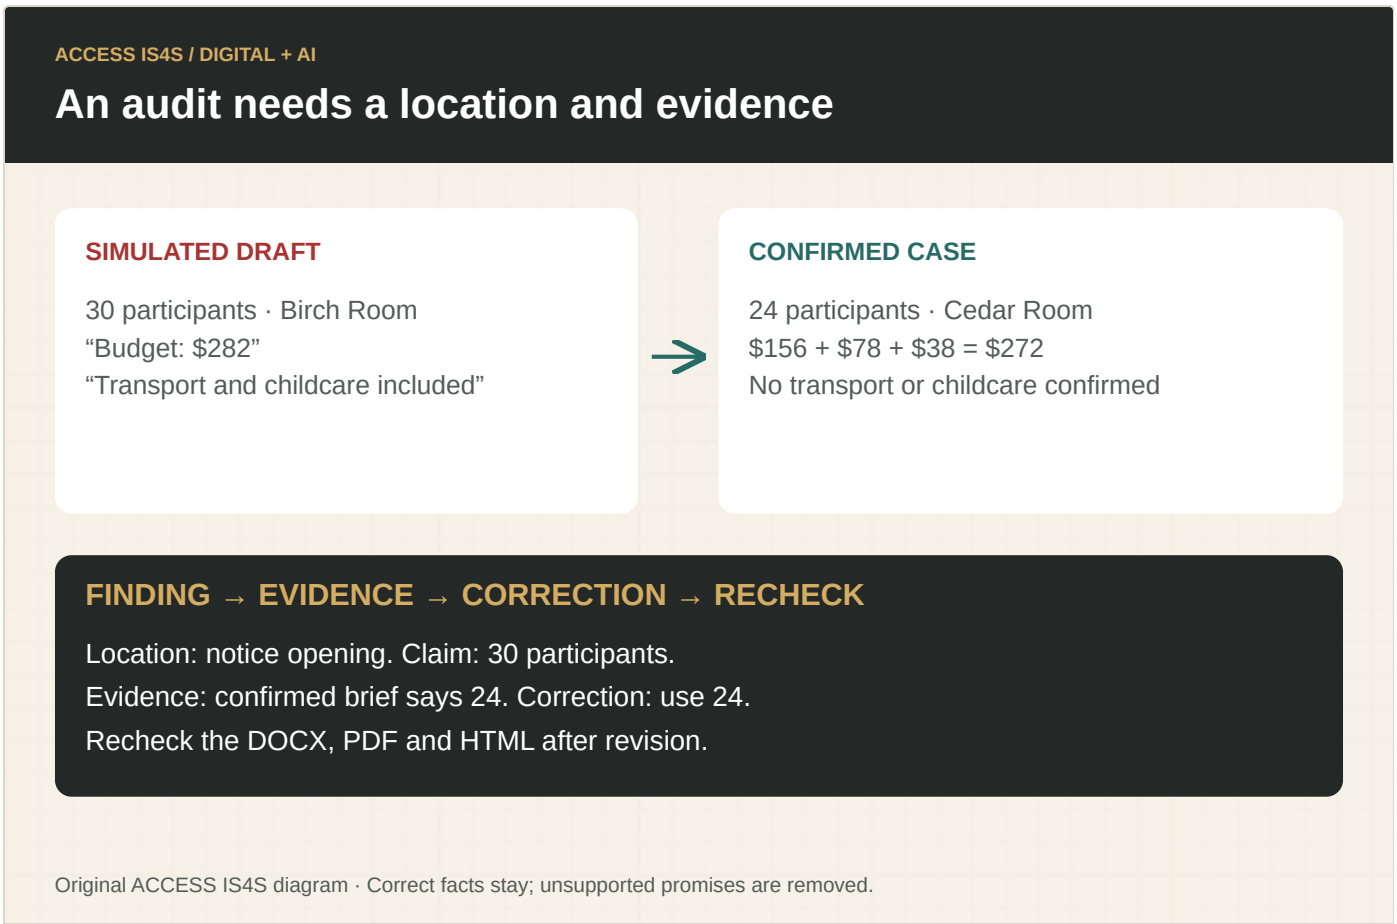

Create a clear instruction

Write or dictate a six-part brief for this case. Ask the AI to list the facts it will use before drafting. Inspect that list and correct any mismatch. Keep your prompt and the corrected fact list as evidence. If you use a supplied simulated response, label it as simulation; it does not demonstrate live AI operation.

Produce editable work

Use an approved AI session with file creation, or direct it to provide content you can save in the appropriate application. Create `learning-day-notice-v1.docx` and `learning-day-budget-v1.xlsx`. The workbook needs Quantity, Unit cost and Line total columns, formulas for each line, a total, budget limit and remaining budget. Ask the tool to state which files it actually created. Download or locate and reopen them; text saying “download here” without a working file is not delivery.

Audit work against evidence

VISUAL GUIDE

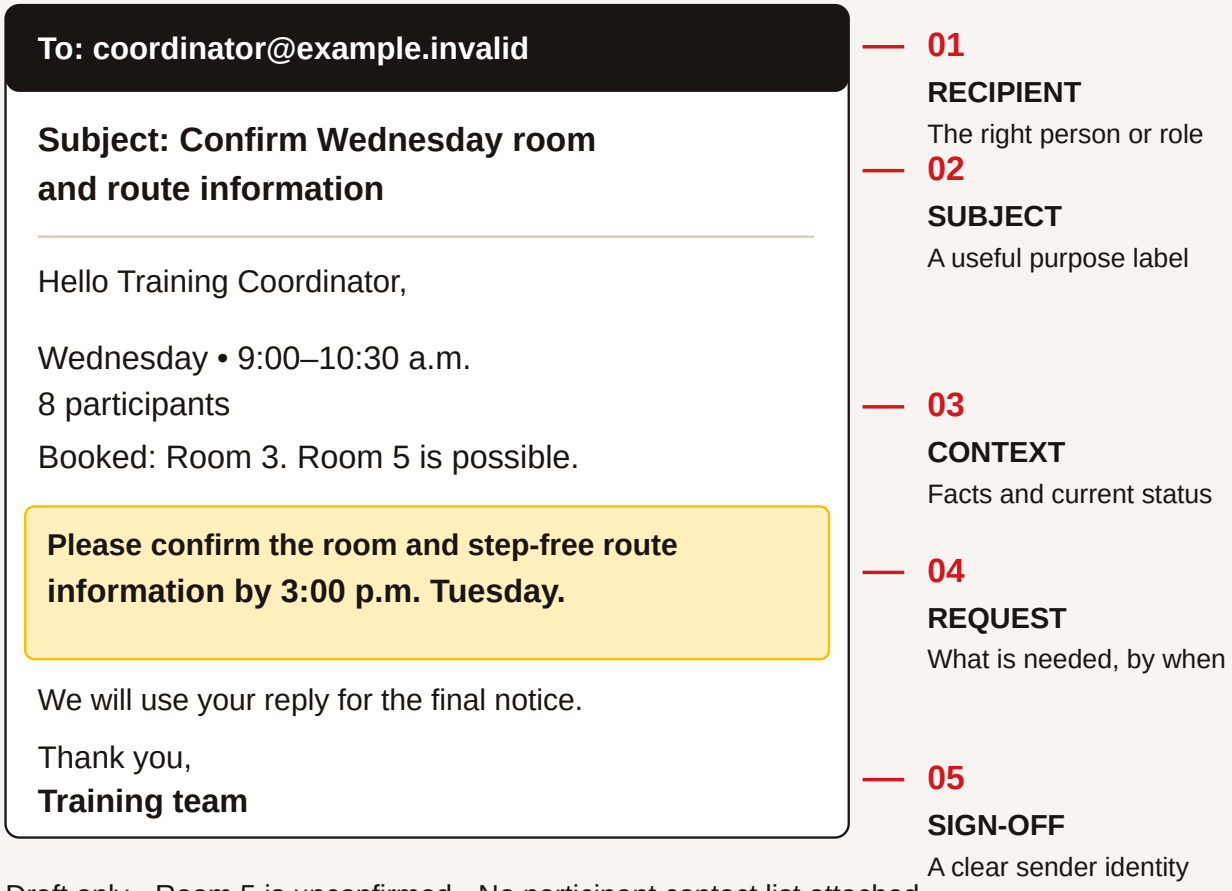

A finding needs a location, source evidence and a checked correction. ACCESS IS4S. (2026). Original instructional SVG. Fictional case.

Worked comparison: unclear draft and useful revision

WRITING / MESSAGE ANATOMY

Make the next action easy to find.

A clear request keeps the facts and the confirmation boundary visible.

Draft only • Room 5 is unconfirmed • No participant contact list attached

VISUAL GUIDE

A concise model makes the recipient, purpose, context, request and sender visible while keeping Room 5 unconfirmed.

Unclear draft: “Hi, are we moving? Everyone needs to know soon. I attached all the phone numbers. Let me know.”

The draft does not identify the session, time, proposed room or response deadline. It assumes the reader knows what “moving” means. The attachment adds personal information that the task does not need. The problem is not simply that the message is informal; it lacks information and makes an unnecessary disclosure.
